

**BICYCLE
COALITION
OF MAINE**

2022 Candidate Questionnaire - Active Transportation

Maine residents throughout the state should all have access to safe places to bike and walk for work, school, recreation, or transportation. Currently, many people report that they do not feel safe walking and biking on Maine's roadways. By providing more active transportation (especially bicycle and pedestrian) facilities, we make every street safer for all users and create vibrant communities.

The Bicycle Coalition of Maine (BCM) invites you to share your position on issues related to making Maine a better and safer place to bike and walk. Your answers will be made public so voters can better understand your position on active transportation.

Candidate Name

Mattie Daughtry

Candidate Office

State Senate

Town/District

Brunswick/23

Do you think active transportation should be a priority for the state?

Yes

Why do you think active transportation should/should not be a priority for the state?

To ensure that we have multiple modes of safe, accessible, and climate + wallet friendly modes of transportation for Mainers.

Do you agree that Complete Streets (a design philosophy that provides safe accommodations for all users based on the context of the street) is the approach Maine needs to take when designing and reconstructing roads, even if it means prioritizing people walking or biking in certain contexts?

Yes

Do you support increasing funding for bicycle and pedestrian facilities, even if it means deferring some motorist roadway projects?

Yes

The number of pedestrian fatalities in Maine doubled in 2021 compared to 2020, and eight pedestrians and one cyclist have died on Maine roads in 2022 to-date (August). What will you do to make our streets measurably safer for people biking, walking, and using wheelchairs?

Keep fighting for the Traffic Safety Education bill. Third times the charm, right? ;-)

How would you support transportation options for the 24% of Mainers who don't or can't drive?

Increased public transportation options as well as creating safer spaces for Mainers to be able to walk, bike, and more.

Forty years ago, more than 60% of school children in the US walked or rode a bicycle to school. Today, that figure is less than 10%. This decline in bicycling and walking and physical activity in general has been mirrored by dramatic increases in negative health impacts for kids. What would you do to reverse this trend?

See above. Also work to increase access to recess and PE. Kids need to move. (So do legislators!)

When was the last time you rode a bike?

Within the last week

Do you walk?

For errands;For health/recreation;For other reasons

Is there anything else you would like to share about active transportation in Maine?
